What is a Traffic Safety Investigation (TSI)?

- A Traffic Safety Investigation (TSI, formerly known as "Traffic Safety Assessment, TSA") is a request from the public to investigate a specific traffic safety concern that may require DDOT's action.
- A TSI can be used for a variety of traffic safety issues such as traffic calming, pedestrian safety, etc.
- DDOT's Traffic Engineering and Safety Division (TESD) will perform a TSI to evaluate the extent of the safety is

Old TSA Process (Discontinued)

Government of the District of Columbia
Department of Transportation

Traffic Safety Assessment Questionnaire

Contact Information	
Name:	Date:
Phone:	Address:
Email:	Signature:

The purpose of this Questionnaire is for DDOT to gather information about a safety concern in order to perform a Traffic Safety Assessment (TSA). The intent of the TSA process is to ask residents to identify traffic safety concerns, whether along a roadway segment or at an intersection, and focus on the definition of the safety concern(s) and then on a proposed solution or mitigation measure. Based on the nature of the request, DDOT will determine the type of assessment necessary to investigate the extent of the traffic safety concern.

To begin a Traffic Safety Assessment, please fill out the information below and answer any questions to the best of your ability. If necessary, please attach additional pages. In addition, please attach a letter of support from the District Commissioner, Councilmember's Office, or representative from the Mayor's Office of Community Relations.

Once completed, please submit this form to DDOT via the address provided below, or you can email the form to traffic.safety@dc.gov.

District Department of Transportation
Customer Service Clearinghouse
55 M Street SE – 7th Floor
Washington, DC 20003

If you have any questions, please contact DDOT at 202-673-6813. Thank you.

Version 1.01, updated May 2019

District Department of Transportation | 55 M Street, SE, Suite 400, Washington, DC 20003 | 202.673.6813 | ddot.dc.gov

- **Step 1:** Submit a 311 request for Traffic Safety Assessment (TSA)
- **Step 2:** Submit a (1) TSA questionnaire along with (2) ANC Commissioner's written endorsement.
- **Step 3:** DDOT evaluates the safety issue to determine if any action is needed.
- **Step 4:** DDOT communicates the findings to the resident.
- **Step 5:** If a safety mitigation is deemed necessary, then DDOT develops recommendations. If recommendations change existing traffic control and/or on-street parking, a Notice of Intent (NOI) will be required. The NOI includes a 30 business-day public comment period.
- **Step 6:** DDOT installs the safety mitigation.

Why Do We Need a New Process?

- Improve ease-of-use and accessibility for District residents.
- Enhance transparency for residents in tracking TSI requests from start to finish.
- Streamline operational processes to improve agency response.
- Accelerate the review of roadway safety requests and make the District's roadways safer across all eight Wards.

New TSI Process – Overview

DDOT is committed to making our city's streets safer for everyone. A combination of roadway users practicing safety, traffic control devices and traffic calming measures can help meet that goal. DDOT's Traffic Safety Investigation (TSI) program will investigate intersections and roadway segments of concern, analyze existing conditions, and provide a plan for safety mitigations, if warranted. The TSI program is designed to focus on one traffic safety concern in one location (one block or intersection). A TSI request should not include multiple streets or multiple intersections.

Effective November 1, 2021, DDOT made it easier for residents to request a TSI. Please review the following steps to request a TSI.

- STEP 1** Resident contacts DDOT with a traffic safety concern by going to 311.dc.gov and selecting Traffic Safety Investigation (TSI).
- Resident provides information about the extent of the safety issue by completing the on-line questionnaire.
 - Information provided should focus on the problem or safety challenge the TSI should address. This will help DDOT identify the most effective solution(s) to address the specific safety concern(s).
- STEP 2** DDOT evaluates the safety issue to determine what action is needed if mitigations are warranted.
- STEP 3** DDOT communicates the findings of the evaluation to the resident.
- If no safety mitigation is needed, then DDOT will deliver the investigation findings to the resident and close out the request.
 - If a safety mitigation is deemed necessary, DDOT develops recommendations for the most appropriate solution(s).
- NOTE:** A TSI takes up to 130 business days to complete Steps 1-3. Once Steps 1-3 are complete, the request will be closed, and the resident will be notified with information on next steps.
- STEP 4** If recommendations change existing traffic control and/or on-street parking, a Notice of Intent (NOI) will be issued. The NOI includes a 30 business-day public comment period from the community and ANCs.
- DDOT considers the comments received at the end of the NOI period in its determination of the mitigation(s) to be implemented. However, feedback may not change the recommendation(s)/improvement(s) as they are based on engineering safety assessments.
- STEP 5** DDOT installs the safety mitigation(s).
- Installation of safety improvements typically occurs in the next calendar quarter after the TSI is completed; for example, a TSI request completed in Quarter 2 (January-March) will be implemented in Quarter 3 (April-June), if a determination is made to implement a safety mitigation.

NOTE: Some improvements are done in specific seasons. For example, installations of vertical traffic calming (speed humps, speed tables, etc.) and street markings take place in the warmer months only.

DDOT's Traffic Safety Investigation (TSI) program will investigate intersections and roadway segments of concern, analyze existing conditions, and provide a plan for safety mitigations, if warranted. The TSI program is designed to focus on one traffic safety concern in one location (one block or intersection). A TSI request should not include multiple streets or multiple intersections.

Effective November 1, 2021, DDOT made it easier for residents to request a TSI. Please review the following steps to request a TSI.

New TSI Process – Step 1

TRAFFIC SAFETY INVESTIGATION

DDOT is committed to making our city's streets safer for everyone. A combination of roadway users practicing safety, traffic control devices and traffic calming measures can help meet that goal. DDOT's Traffic Safety Investigation (TSI) program will investigate intersections and roadway segments of concern, analyze existing conditions, and provide a plan for safety mitigations, if warranted. The TSI program is designed to focus on one traffic safety concern in one location (one block or intersection). A TSI request should not include multiple streets or multiple intersections.

Effective November 1, 2021, DDOT made it easier for residents to request a TSI. Please review the following steps to request a TSI.

- STEP 1** Resident contacts DDOT with a traffic safety concern by going to 311.dc.gov and selecting Traffic Safety Investigation (TSI).
- Resident provides information about the extent of the safety issue by completing the on-line questionnaire.
 - Information provided should focus on the problem or safety challenge the TSI should address. This will help DDOT identify the most effective solution(s) to address the specific safety concern(s).

- STEP 2** DDOT evaluates the safety issue to determine what action is needed if mitigations are warranted.

- STEP 3** DDOT communicates the findings of the evaluation to the resident.
- If no safety mitigation is needed, then DDOT will deliver the investigation findings to the resident and close out the request.
 - If a safety mitigation is deemed necessary, DDOT develops recommendations for the most appropriate solution(s).

NOTE: A TSI takes up to 130 business days to complete Steps 1-3. Once Steps 1-3 are complete, the request will be closed, and the resident will be notified with information on next steps.

- STEP 4** If recommendations change existing traffic control and/or on-street parking, a Notice of Intent (NOI) will be issued. The NOI includes a 30 business-day public comment period from the community and ANCs.

- DDOT considers the comments received at the end of the NOI period in its determination of the mitigation(s) to be implemented. However, feedback may not change the recommendation(s)/improvement(s) as they are based on engineering safety assessments.

- STEP 5** DDOT installs the safety mitigation(s).

- Installation of safety improvements typically occurs in the next calendar quarter after the TSI is completed; for example, a TSI request completed in Quarter 2 (January-March) will be implemented in Quarter 3 (April-June), if a determination is made to implement a safety mitigation.

NOTE: Some improvements are done in specific seasons. For example, installations of vertical traffic calming (speed humps, speed tables, etc.) and street markings take place in the warmer months only.

- Resident contacts DDOT with a traffic safety concern by going to 311.dc.gov and selecting Traffic Safety Investigation (TSI).
 - Resident provides information about the extent of the safety issue by completing the online questionnaire via 311.
 - Information provided should focus on the problem or safety challenge the TSI should address. This will help DDOT identify the most effective solution(s) to address the specific safety concern(s).

Details

Contact

Submit

A Traffic Safety Investigation should focus on a distinct traffic safety concern and should not be associated to multiple streets or multiple intersections.

What is the nature of the traffic safety issue?

Please Select Option

* Required

Please describe your safety concerns in details.

* Required

Was the problem detected on a weekday or during the weekend? (check all that apply)

☐ Weekday

☐ Weekend

What time of the day was the problem noticed? (check all that apply)

☐ Morning

☐ Midday

☐ Afternoon

☐ Evening

☐ Late Night

Where along the roadway is the issue located?

☐ At the intersection

☐ In the middle of the street

☐ At the crosswalk

☐ At the alley entrance

Upload a file

Remember: Be specific. Share details about the safety concerns.

Example 1: This intersection has only two-way stop signs, so cars don't stop for pedestrians when trying to cross the street where stop signs are not present. Also, when driving, it's hard to see cars coming from XX Street due to parked cars too close to the intersection.

Example 2: Speeding is a problem along XX block of A St. Cars are dangerously speeding even though this is a school zone.

New TSI Process – Step 2

TRAFFIC SAFETY INVESTIGATION

DDOT is committed to making our city's streets safer for everyone. A combination of roadway users practicing safety, traffic control devices and traffic calming measures can help meet that goal. DDOT's Traffic Safety Investigation (TSI) program will investigate intersections and roadway segments of concern, analyze existing conditions, and provide a plan for safety mitigations, if warranted. The TSI program is designed to focus on one traffic safety concern in one location (one block or intersection). A TSI request should not include multiple streets or multiple intersections.

Effective November 1, 2021, DDOT made it easier for residents to request a TSI. Please review the following steps to request a TSI.

- STEP 1** Resident contacts DDOT with a traffic safety concern by going to 311.dc.gov and selecting Traffic Safety Investigation (TSI).
- Resident provides information about the extent of the safety issue by completing the on-line questionnaire.
 - Information provided should focus on the problem or safety challenge the TSI should address. This will help DDOT identify the most effective solution(s) to address the specific safety concern(s).

- STEP 2** DDOT evaluates the safety issue to determine what action is needed if mitigations are warranted.

- STEP 3** DDOT communicates the findings of the evaluation to the resident.
- If no safety mitigation is needed, then DDOT will deliver the investigation findings to the resident and close out the request.
 - If a safety mitigation is deemed necessary, DDOT develops recommendations for the most appropriate solution(s).

NOTE: A TSI takes up to 130 business days to complete Steps 1-3. Once Steps 1-3 are complete, the request will be closed, and the resident will be notified with information on next steps.

- STEP 4** If recommendations change existing traffic control and/or on-street parking, a Notice of Intent (NOI) will be issued. The NOI includes a 30 business-day public comment period from the community and ANCs.

- DDOT considers the comments received at the end of the NOI period in its determination of the mitigation(s) to be implemented. However, feedback may not change the recommendation(s)/improvement(s) as they are based on engineering safety assessments.

- STEP 5** DDOT installs the safety mitigation(s).
- Installation of safety improvements typically occurs in the next calendar quarter after the TSI is completed; for example, a TSI request completed in Quarter 2 (January-March) will be implemented in Quarter 3 (April-June), if a determination is made to implement a safety mitigation.

NOTE: Some improvements are done in specific seasons. For example, installations of vertical traffic calming (speed humps, speed tables, etc.) and street markings take place in the warmer months only.

- DDOT evaluates the safety issue to determine if mitigations are warranted.

New TSI Process – Step 3

DDOT is committed to making our city's streets safer for everyone. A combination of roadway users practicing safety, traffic control devices and traffic calming measures can help meet that goal. DDOT's Traffic Safety Investigation (TSI) program will investigate intersections and roadway segments of concern, analyze existing conditions, and provide a plan for safety mitigations, if warranted. The TSI program is designed to focus on one traffic safety concern in one location (one block or intersection). A TSI request should not include multiple streets or multiple intersections.

Effective November 1, 2021, DDOT made it easier for residents to request a TSI. Please review the following steps to request a TSI.

- STEP 1** Resident contacts DDOT with a traffic safety concern by going to 311.dc.gov and selecting Traffic Safety Investigation (TSI).
- Resident provides information about the extent of the safety issue by completing the on-line questionnaire.
 - Information provided should focus on the problem or safety challenge the TSI should address. This will help DDOT identify the most effective solution(s) to address the specific safety concern(s).

- STEP 2** DDOT evaluates the safety issue to determine what action is needed if mitigations are warranted.

- STEP 3** DDOT communicates the findings of the evaluation to the resident.
- If no safety mitigation is needed, then DDOT will deliver the investigation findings to the resident and close out the request.
 - If a safety mitigation is deemed necessary, DDOT develops recommendations for the most appropriate solution(s).

NOTE: A TSI takes up to 130 business days to complete Steps 1-3. Once Steps 1-3 are complete, the request will be closed, and the resident will be notified with information on next steps.

- STEP 4** If recommendations change existing traffic control and/or on-street parking, a Notice of Intent (NOI) will be issued. The NOI includes a 30 business-day public comment period from the community and ANCs.
- DDOT considers the comments received at the end of the NOI period in its determination of the mitigation(s) to be implemented. However, feedback may not change the recommendation(s)/improvement(s) as they are based on engineering safety assessments.

- STEP 5** DDOT installs the safety mitigation(s).
- Installation of safety improvements typically occurs in the next calendar quarter after the TSI is completed; for example, a TSI request completed in Quarter 2 (January-March) will be implemented in Quarter 3 (April-June), if a determination is made to implement a safety mitigation.

NOTE: Some improvements are done in specific seasons. For example, installations of vertical traffic calming (speed humps, speed tables, etc.) and street markings take place in the warmer months only.

- DDOT communicates the findings of the evaluation to the resident.
 - If no safety mitigation is warranted, then DDOT will deliver the investigation findings to the resident and close out the request.
 - If a safety mitigation is warranted, DDOT develops recommendations for the most appropriate solution(s) and closes the request.
- **NOTE:** A TSI takes up to 130 business days to complete Steps 1-3. Once Steps 1-3 are complete, the request will be closed, and the resident will be notified with information on next steps via 311 notification, if applicable.

New TSI Process – Step 4

DDOT is committed to making our city's streets safer for everyone. A combination of roadway users practicing safety, traffic control devices and traffic calming measures can help meet that goal. DDOT's Traffic Safety Investigation (TSI) program will investigate intersections and roadway segments of concern, analyze existing conditions, and provide a plan for safety mitigations, if warranted. The TSI program is designed to focus on one traffic safety concern in one location (one block or intersection). A TSI request should not include multiple streets or multiple intersections.

Effective November 1, 2021, DDOT made it easier for residents to request a TSI. Please review the following steps to request a TSI.

- STEP 1** Resident contacts DDOT with a traffic safety concern by going to 311.dc.gov and selecting Traffic Safety Investigation (TSI).
- Resident provides information about the extent of the safety issue by completing the on-line questionnaire.
 - Information provided should focus on the problem or safety challenge the TSI should address. This will help DDOT identify the most effective solution(s) to address the specific safety concern(s).

- STEP 2** DDOT evaluates the safety issue to determine what action is needed if mitigations are warranted.

- STEP 3** DDOT communicates the findings of the evaluation to the resident.
- If no safety mitigation is needed, then DDOT will deliver the investigation findings to the resident and close out the request.
 - If a safety mitigation is deemed necessary, DDOT develops recommendations for the most appropriate solution(s).

NOTE: A TSI takes up to 130 business days to complete Steps 1-3. Once Steps 1-3 are complete, the request will be closed, and the resident will be notified with information on next steps.

- STEP 4** If recommendations change existing traffic control and/or on-street parking, a Notice of Intent (NOI) will be issued. The NOI includes a 30 business-day public comment period from the community and ANCs.
- DDOT considers the comments received at the end of the NOI period in its determination of the mitigation(s) to be implemented. However, feedback may not change the recommendation(s)/improvement(s) as they are based on engineering safety assessments.

- STEP 5** DDOT installs the safety mitigation(s).
- Installation of safety improvements typically occurs in the next calendar quarter after the TSI is completed; for example, a TSI request completed in Quarter 2 (January-March) will be implemented in Quarter 3 (April-June), if a determination is made to implement a safety mitigation.

NOTE: Some improvements are done in specific seasons. For example, installations of vertical traffic calming (speed humps, speed tables, etc.) and street markings take place in the warmer months only.

- If recommendations change existing traffic control and/or on-street parking, a Notice of Intent (NOI) will be issued. The NOI includes a 30 business-day public comment period from the community and ANCs.
 - DDOT considers the comments received at the end of the NOI period in its determination of the mitigation(s) to be implemented. However, feedback may not change the recommendation(s)/improvement(s) as they are based on engineering safety assessments.

New TSI Process – Step 5

TRAFFIC SAFETY INVESTIGATION

DDOT is committed to making our city's streets safer for everyone. A combination of roadway users practicing safety, traffic control devices and traffic calming measures can help meet that goal. DDOT's Traffic Safety Investigation (TSI) program will investigate intersections and roadway segments of concern, analyze existing conditions, and provide a plan for safety mitigations, if warranted. The TSI program is designed to focus on one traffic safety concern in one location (one block or intersection). A TSI request should not include multiple streets or multiple intersections.

Effective November 1, 2021, DDOT made it easier for residents to request a TSI. Please review the following steps to request a TSI.

- STEP 1** Resident contacts DDOT with a traffic safety concern by going to 311.dc.gov and selecting Traffic Safety Investigation (TSI).
- Resident provides information about the extent of the safety issue by completing the on-line questionnaire.
 - Information provided should focus on the problem or safety challenge the TSI should address. This will help DDOT identify the most effective solution(s) to address the specific safety concern(s).

- STEP 2** DDOT evaluates the safety issue to determine what action is needed if mitigations are warranted.

- STEP 3** DDOT communicates the findings of the evaluation to the resident.
- If no safety mitigation is needed, then DDOT will deliver the investigation findings to the resident and close out the request.
 - If a safety mitigation is deemed necessary, DDOT develops recommendations for the most appropriate solution(s).

NOTE: A TSI takes up to 130 business days to complete Steps 1-3. Once Steps 1-3 are complete, the request will be closed, and the resident will be notified with information on next steps.

- STEP 4** If recommendations change existing traffic control and/or on-street parking, a Notice of Intent (NOI) will be issued. The NOI includes a 30 business-day public comment period from the community and ANCs.

- DDOT considers the comments received at the end of the NOI period in its determination of the mitigation(s) to be implemented. However, feedback may not change the recommendation(s)/improvement(s) as they are based on engineering safety assessments.

- STEP 5** DDOT installs the safety mitigation(s).

- Installation of safety improvements typically occurs in the next calendar quarter after the TSI is completed; for example, a TSI request completed in Quarter 2 (January-March) will be implemented in Quarter 3 (April-June), if a determination is made to implement a safety mitigation.

NOTE: Some improvements are done in specific seasons. For example, installations of vertical traffic calming (speed humps, speed tables, etc.) and street markings take place in the warmer months only.

- DDOT installs the safety mitigation(s)
 - Installation of safety improvements typically occurs in the next calendar quarter* after the TSI is completed; for example, a TSI request completed in Quarter 2 (January-March) will be implemented in Quarter 3 (April-June), if a determination is made to implement a safety mitigation.

* DDOT works on a fiscal year calendar with Oct-Dec being Quarter 1

NOTE: Some installations will be delayed due to weather as they require warmer temperatures for installation. For example, installations of vertical traffic calming (speed humps, speed tables, etc.) and street markings take place in the warmer months only.

DDOT has sent these Traffic Safety Investigations service requests for data collection to determine if permanent physical changes should be made to the roadway. Changes that require data collection include but are not limited to lane changes, one-way conversions, speed humps on non-local roads, stop signs, and other traffic calming measures.

The Service Resolution Estimate for a Traffic Safety Investigation is 130 business days.

Pending Data Collection

- Upon initial review, DDOT determined data collection was required for this TSI. Examples include, but not limited to, All Way Stop Control (AWSC), one-way conversion, speed humps on non-local road, and other traffic calming measures.

TSI Frequently Asked Questions (FAQs):

1. Clarify what happens with TSIs already in the queue under the old system? Are changes effective retroactively or will the new TSIs be the first to undergo the new process?

TSIs currently in the queue under the old system will follow the new model.

2. What's the main difference between TSA and TSI in terms of document requirements?

The new TSI process no longer requires the separate questionnaire or ANC endorsement letter. Residents will only be required to complete a 311 service request which asks the necessary questions for DDOT's review. This will substantially reduce the number of requests that are closed due to a lack of required documents. Also, ANC resolutions and resident petitions are also no longer required.

3. Clarify the role of ANCs in the new process.

ANCs will not need to be involved at the start of the TSI intake process. However, DDOT will continue to engage the ANC when the Notice of Intent (NOI) process is required for changes in existing traffic control and/or on-street parking (e.g. new stop signs, new signal, parking signs, etc.). In addition, DDOT will notify the ANC via email when vertical traffic calming (e.g. speed humps, speed tables, etc.) is warranted. This notification is not required by law, but DDOT does as a courtesy to provide an advanced notification to the ANC.

TSI Frequently Asked Questions (FAQs):

4. My TSI was closed with recommendations for safety improvements. Why don't I see the work underway?

As indicated in Step 5, installations of safety improvements typically occur in the next calendar quarter after the TSI is completed. For example, a TSI request completed in Quarter 2 (January-March) will be implemented in Quarter 3 (April-June). Also, please note that some improvements require warmer temperatures. For example, markings and speed humps installations are weather dependent and only take place during warmer months.

5. My TSI was closed without recommendations to make changes. Why did DDOT take no action?

As indicated in Step 3, DDOT will deliver the investigation findings to the resident that include why safety mitigations were not warranted. Reasons can vary but examples include:

- There is a larger project planned in the immediate area that will impact the TSI area. An example would include projects like the Florida Ave/New York Ave Intersection project (also known as "Dave Thomas Circle" project).
- Data collection shows the existing conditions do not meet the warrant criteria for certain safety measures (e.g. speed tables, ATEs, AWSC, etc.) and/or engineering evaluation does not find the need for any changes to the existing conditions.

ANC Resolution Submission and Response

- To assist in tracking and timely response, all ANC resolutions must be submitted to DDOT via the ANC Portal at <https://resolutions.anc.dc.gov>, effective Jan 24, 2022.
- Once an ANC resolution is submitted through the ANC portal, DDOT will send an acknowledgement letter within 10 business days with a tracking number and will respond to your resolution with a written response within 60 business days pursuant to §1-309.10(h)(1).
- This change is intended to support greater continuity in the ANC resolution submission process and to improve transparency, accountability, and accessibility. Resolutions submitted outside of the ANC Portal will not be tracked or reviewed.
- For assistance with accessing the portal, please contact the Office of Advisory Neighborhood Commissions at oanc@dc.gov.

NOTE: Please include 311 service request numbers in ANC resolutions submitted to DDOT. All requests follow DDOT Service Level Agreements (SLAs).
